Please amend the following paragraphs of the specification in the manner indicated:

[0022] (b) ~~detecting corresponding~~ pairing components in the left and right channel signals by detecting left and right channel components, potentially offset in time, that match in pitch and in amplitude variation profile and using the paired components ~~them~~ to infer the presence of at least one sound source and determine its azimuth location; and

[0026] a correlation arrangement for ~~detecting corresponding~~ pairing components in the left and right channel signals by detecting left and right channel components, potentially offset in time, that match in pitch and in amplitude variation profile;

[0027] a source-determination arrangement for using the ~~detected corresponding~~ paired components to infer the presence of at least one sound source and determine its azimuth location; and
